

A1.3: Basic Application Development (Version 2) (5%) - W7-Fri (S2 2026)

Instructions

SUBMISSIONS DUE (Moodle):

Basic Application Development (**Version 2**) Friday, Week 7 — Friday, 11 September 2026, 11:55 PM

Week 6 for Assessment (A1.2 and/or A1.3) progress check-ins (not-graded but a requirement)

Instructions

Read the [Assessment Overview](#) comprehensively.

Create and submit a web application that fulfills **Business Requirements C**.

Please don't worry about Firebase for this assignment - this "basic app" can be done entirely in client-side code.

1. Download the submission template:

<https://docs.google.com/document/d/1XqrHFfYq6QvvpDzgeCSc1PHVYr6dSVGHd3z3YeBYNXo/copy>

2. **Make sure to share your github repository with your tutor as soon as you start your A1.3 project.**

Note: If you are extending your A1.2 submission to do your A1.3, no need to create a new GitHub project - you can extend your previous assignment work and your tutor already should have access to this submission.

3. If you are attempting BR C.4 (Security), there is a brief reflection you need to fill about your approach to Security in the submission template.

What to submit in Moodle?

A zip file containing:

- A basic application (version 2) completing Business Requirements C.
- Filled in copy of the submission template

Note: We will be checking your Github commit history for coding assignments.

A penalty (up to 60%) will be applied to submissions where:

- the student has not shared a Github project repository with the tutor, OR
- The Github repository contains less than 3 code commits.
- All commits have been done within a <48 hour period.

All commits shouldn't be within a <48 hours before submission deadline to avoid any penalty. If you do one commit earlier (e.g. >48 hours before submission deadline), all good.
